both volumes sold as a combined set for a one time purchase older adults represent the most rapidly growing demographic in the u s and in many developed countries around the world the field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature medicare and medicaid expenditures related to older adults are nearly a trillion dollars year in the us how our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance according to the institute of medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life it is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about thegeriatric approach to care geriatric medicine varies from most other fields in medicine while many specialties function on the basis of evidence based literature geriatricians and

other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants. Geriatricians are used to caring for 90-year-olds with multiple chronic illnesses; their variable physiology leads to uncertain responses to pharmacotherapy, and their personal goals and wishes need to be incorporated into any plan of care. Practicing geriatric medicine requires the ability to see patterns, but it goes one step further as the rules are constantly in flux. Every patient is an individual with particular needs and goals. In order to provide true person-centered care to older adults, one has to incorporate these factors into the decision-making process. The proposed handbook is designed to present a comprehensive and state-of-the-art update that incorporates existing literature with clinical experience, basic science, and the physiology of aging. It creates a background but is not the main focus. This is because every chapter has been written through the lens of person-centered care. This book is about focusing on what matters to the person and how that is not always about pathology and physiology. The reader generally will not find simple solutions to symptoms, diseases, and syndromes. In fact, the key to caring for geriatric patients is the ability to think both critically and divergently at the same time. Geriatrics encompasses multiple disciplines and spans all of the subspecialties. It requires knowledge of working within an interdisciplinary team. It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary. Most of all, it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person-centered plan of care. This book aims to serve as an unparalleled resource for meeting these challenges, updated and revised from the previous edition. This text features over 40 new peer-reviewed chapters, new references, and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine.
